

Microsoft 365

Enterprise security and compliance

Increasing risk requires intelligent solutions for today's organizations

One of the biggest challenges in running a business today is ensuring security, privacy, and compliance. When companies embrace the opportunities presented by cloud and mobile computing to connect with customers and optimise operations, they also take on new risks.

Organisations must focus on protecting themselves from increasing threats to take full advantage of the productivity promise of digital transformation.

However, it can be challenging to:

- Identify, assess, and mitigate security risks
- Stay up-to-date and familiar with security best practices and the overall threat landscape
- Correctly respond to compliance obligations in a timely fashion

As a Microsoft partner, we can help!

Our skilled team of professionals has expertise in the area of security and compliance that can help businesses like yours. A great way to begin is with an assessment of your current technology and your level of security. We can also share how the latest Microsoft technologies offer you expanded options.

The threat landscape continues to evolve

4.2 billion

Customer records compromised¹

99 days

From breach to detection²

\$17 million

Average cost of a security breach³

Microsoft 365 Enterprise

A complete, intelligent solution with enterprise-level security

Microsoft 365 brings together **Office 365, Windows 10, Enterprise Mobility + Security.**

The broad set of capabilities within Microsoft 365 combines powerful tools and features that allow you to help prevent, manage, and respond to growing threats. With Microsoft 365 you can help safeguard your customer data, company data and intellectual property with built-in, intelligent security.

Protect your organization against external threats

Microsoft 365 offers holistic, integrated protection in a single end-to-end solution:

- Protect against new threats: Protect, detect, and respond to malware; prevent data leaks, and safeguards data
- Comprehensive and integrated: Security capabilities are built right in
- Productive end user experience: Consistent, familiar user experience across the board

About cubesys

We can help you turn a confusing array of services, licensing options, and overlapping feature sets into a cohesive, comprehensive, and understandable solution. Let us show you how to manage your security, protect your assets, respond to security incidents, and stay compliant with regulations such as GDPR.

Focus solution areas

Enterprise-Level Identity Protection

Protect your organization's data from unauthorized access and identity threats by safeguarding and managing identity, and protecting against password attacks.

Control and Protect Information

We can help you protect business data while enabling user productivity and collaboration across devices and locations.

Proactive Attack Detection and Prevention

Our security assessment analysis, migration and deployment solutions, and managed security services can help you identify attacks and attackers before they cause damage.

Regulatory compliance

We can help you meet compliance obligations the increasing demands of regulators and legal authorities.

We offer

- Modern Desktop Management
- Modern Desktop Migration Services
- Microsoft Security Services

Want to see how your security stacks up? Call us for one of these assessments to help you identify your gaps:

Office 365 Security Assessment

When you work with a partner to conduct the Office 365 Security Assessment, you will be able to help identify security objectives and requirements, which helps to create a prioritized and actionable security roadmap for Office 365.

Key Benefits:

- Understand cloud security objectives and requirements
- Evaluate Office 365 security readiness
- Create an Office 365 security roadmap

GDPR Detailed Assessment

Are you ready for the EU General Data Protection Regulation (GDPR)? Evaluate your GDPR readiness level by helping to assess your organization's relevant people, processes, and technology.

Key Benefits:

- The assessment is built around a questionnaire with 150+ non-product specific and non-technical questions
- A generated report shows recommendations to guide customers to appropriate Microsoft solutions and technology, people, and processes
